# Drawing Circuits In Tinkercad

To draw circuits in Tinkercad:

1. Open Tinkercad and start a new circuit project.
2. Drag and drop components like breadboards, resistors, and LEDs from the library.
3. Connect components by clicking and dragging to create wires.
4. Edit component properties (e.g., resistance or LED color) as needed.
5. Test the circuit by clicking "Start Simulation" to ensure it works properly.
